Start free and run it in production. Grow with a license, not a rebuild.

Timebase Historian and the components that feed it have always been free. With Timebase 2.0, Timebase Atlas and Bridge join them. Model a production line or a plant area and run it in production at no charge, forever.

Three tiers, one platform

PER SITE, AS LOW AS

TIER	CAPACITY PER SITE	WHAT IT ADDS	SITE / MO*
Timebase Forever Free Atlas + Bridge included	**100 Types** 1,000 Instantiations	The full platform, not a trial. Renews annually at no charge.	**$0** forever
Timebase Atlas Growth	**5,000 Types** 100,000 Instantiations	Lifts Atlas capacity for the site without changing the deployment.	**$975** per site
Timebase Atlas Growth + Bridge Growth	**5,000 Types** 100,000 Instantiations	Enables Bridge across every Type and Instantiation licensed under the site's Atlas Growth license.	**$1,650** per site
Timebase Enterprise ELA designed for 5+ sites	**Custom**	Multi-site licensing, custom capacity, enterprise-grade features, and a deployment shaped around your architecture.	**Quoted** on request

**Monthly cost per site calculated from a three-year Growth term paid in full at the start. Month to month, one-year prepaid, and three-year annually billed options are available at published rates.*

EARLY ADOPTER BENEFIT

2x Instantiations, same price. Early adopters on a three-year Timebase Growth term get Atlas Growth at 5,000 Types and 200,000 Instantiations, with Bridge enabled across all of them.

What every tier gets

RUNS IN YOUR ENVIRONMENT

01 The full component set

Data Collector, Connect, Explorer, Historian, standard Pulse functions, full API and MCP server access, and Gage, the Timebase AI Harness. **Timebase Atlas works with any existing historian.**

02 Your infrastructure, your data

Operational data, the knowledge graph that gives it context, and the AI harness that reasons over it all stay on infrastructure you control. **No plant data ships to a vendor cloud to get value from it.**

Upgrade is a license change

Growth lifts capacity per site without changing the deployment. Same models, same integrations, same infrastructure. When five or more sites are in play, Timebase Enterprise brings them under one ELA.

BOTTOM LINE

Start free and run it in production. Grow with a license, not a rebuild.
